

# Mustud

***‘Mustud’ available now.  
Free on the Apple App Store.***

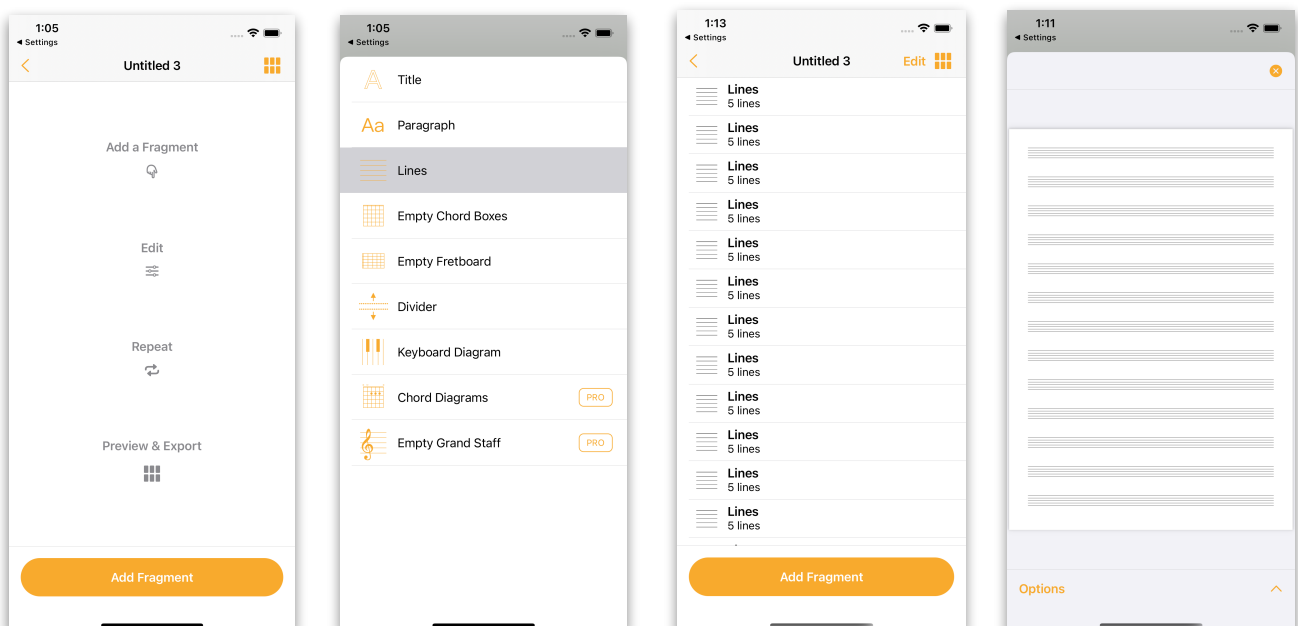

An app for creating music theory worksheets and exams.

Designed by a music educator turned iOS developer, Mustud aims to be the ultimate replacement for the clunky tools we’ve been using for years.

Up until now, teachers would have to either make use of the pre-made worksheet libraries bundled into current sheet music software, spend hours searching the internet, or make their own using applications not designed for the task.

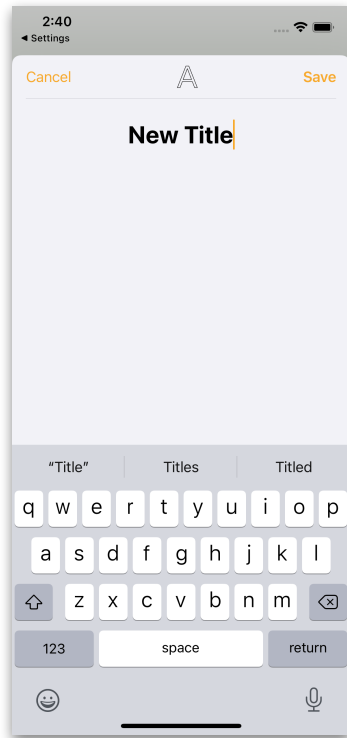

‘Mustud’ (as far as I know) is the *only* software that has been designed for this specific task. It features a new kind of layout system called ‘Fragments’. Each Fragment is an isolated and customizable row of information that can be added to the document.

For example, if you want to add a set of blank staff lines, you can do that with the ‘Lines Fragment’. Duplicate this fragment a few times and you’ll have yourself a full sheet of blank manuscript paper!

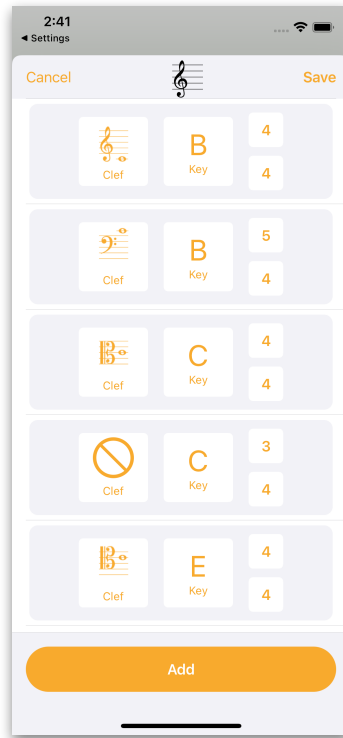

## Editing

Every Fragment has its own unique screen for customisation. **Titles** and **Paragraphs** have textfields. The **Grand Staff Fragment** allows you to select a Clef, Key, and Time Signature.

## Sharing

All documents can be shared as a **PDF** or **.mustud** file type. The **PDFs** are generated at the code level as vectors. This means that the files are small and of infinitely crisp quality. There are no pre-rendered images here!

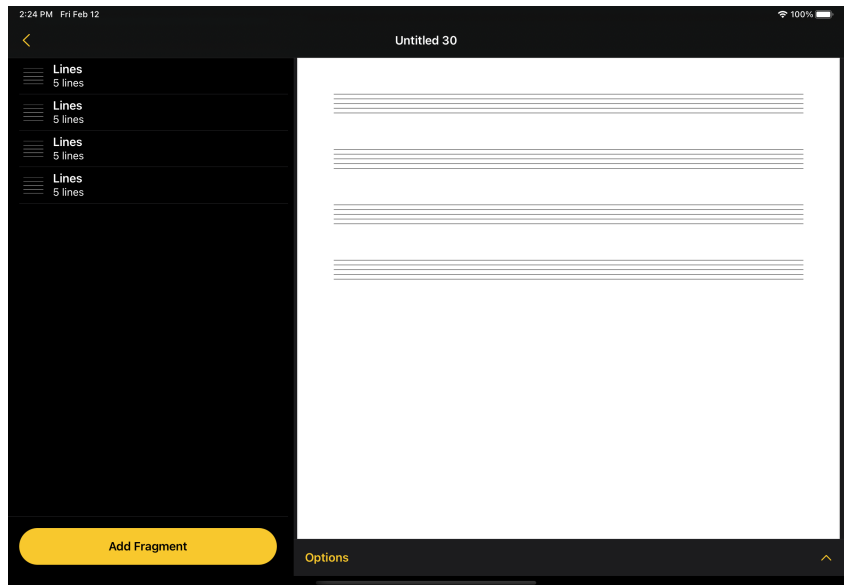

## iPadOS

The iPad version of the app is also worth mentioning as it allows you to compose and view your changes at the same time with the editor and preview screens displayed side-by-side.

Mustud also has dark mode!

# macOS

Released as of 31st March, 2021.
